

**MISSOURI DIVISION OF CREDIT UNIONS**

**Department of Insurance, Financial Institutions and  
Professional Registration**

**Member Data Report**

**2007**

## **DESCRIPTION OF REPORT**

The Division of Credit Unions is the regulator of all state-chartered credit unions in Missouri. The period covered for this Member Data Report is from July 1, 2006 through June 30, 2007.

The Division of Credit Union's Member Data Report is divided into two sections. The first section is a report of the types and numbers of loans for which credit union members received approval while the second section includes aggregated information about the census tracts in which members reside which includes the estimated annual income of members.

### **1) Loan Approvals**

The report shows the number of loans granted for each Missouri state-chartered credit union from the dates of July 1, 2006 through June 30, 2006. The loans are segregated by the following types: Unsecured, Vehicle, Commercial, Real Estate and Other. The information for each Missouri state-chartered credit union is aggregated unto one report.

### **2) Membership Information**

The United States Census Bureau offers the following description of census tracts. Census tracts are defined as small, relatively permanent statistical subdivisions of a county....Census tracts usually have between 2,500 and 8,000 persons, and, when first delineated, are designed to be homogeneous with respect to population characteristics, economic status, and living conditions. Census tracts do not cross county boundaries. The spatial size of census tracts varies widely depending on the density of settlement. Census tract boundaries are delineated with the intention of being maintained over a long time so that statistical comparisons can be made from census to census. However, physical changes in street patterns caused by highway construction, new development, etc., may require occasional revisions; census tracts occasionally are split due to large population growth, or combined as a result of substantial population decline.

MSA's are to be defined as Metropolitan Statistical Areas and Metropolitan Divisions which are defined by the United States Office of Management and Budget (OMB) as geographic entities for use by Federal statistical agencies in collecting, tabulating, and publishing Federal statistics.

Each credit union has a separate one page report versus the previous aggregated report. The program used for these reports segregates the credit union's membership based on the member's census tract which is determined by the mailing address the credit union uses for each member. Multiple addresses among each credit union's membership list were not considered for this report, only households. A household with multiple accounts is only considered once. Thus, the figures shown are for the credit union's households by census tract.

Each credit union's report distributes the credit union's members/households into five different income levels which are listed and defined as follows:

-Low

The number of households with a mailing address in census tracts where the median income for a family is 50 % or less than the median family income for the MSA in which the census tract is located.

For example, if a member's mailing address is in a census tract where the median family income is \$25,000 and median family income for the MSA in which the census tract exists is \$51,000, the percentage would be 49% and would be grouped here.

-Moderate

The number of households with a mailing address in census tracts where the median income for a family is between 50% and 80% of the median family income for the MSA in which the census tract is located.

-Middle

The number of households with a mailing address in census tracts where the median income for a family is between 80% and 120% of the median family income for the MSA in which the census tract is located.

-Upper

The number of households with a mailing address in census tracts where the median income for a family is 120% or greater than the median family income for the MSA in which the census tract is located.

-NA

The numbers of households with a mailing address that could not be linked to a specific Census Tract. The main example of this would be members with a P.O. Box for a mailing address. Other examples would be international addresses, prisons, hospitals, etc.

The total of all income levels equals the total number of households for each credit union. The column of the right side of each report titled "Distribution of Tracts by Income Level" use a similar algorithm. Each line signifies the amount of census tracts the membership is consisted of. For example, if a credit union has 100 households within a

specific census tract, the tract is only counted once. The income breakdown shows how many census tracts and their income breakdown. Each census tract is grouped based on their comparison to their specific MSA income level.

**Supplementary Notes:**

-This report considers all address within the United States. A census tract in the St. Louis MSA would be compared to the St. Louis MSA. Likewise a census tract located in Memphis, Tennessee would be compared to the Memphis MSA.

-Members with addresses in census tracts that are not in an MSA (typically predominant in a rural area) would be grouped based upon the non-MSA income for the state in which the census tract is located. The non-MSA median family income in Missouri was \$36,175 for the 2000 Census.

-The reports concerning membership information are generated by using CRA Wiz copyrighted by PCi Corporation.

-Any information used to prepare the membership information reports is the proprietary data of each credit union which is not available to the public.
